In 1995-1998, the authors treated 5 patients with anti-factor VIII antibodies and spontaneous bleeding. All patients had underlying malignant conditions. Initial control of the bleeding episodes and reduction in inhibitor titer was achieved in all patients. Disappearance of factor VIII inhibitor occurred in 3 patients after either resection of the tumor or chemotherapy. Immunosuppression therapy failed to eradicate the antibody in 2 patients with metastatic disease. Antibodies against factor VIII appearing in certain patients may be directly associated with the underlying malignancy, rather than a coincidental finding. Attempts to reduce the titer or eradicate the inhibitor may fail if recognition of the underlying condition is not sought, or an appropriate treatment of cancer is not offered. Antibodies against factor VIII developing in previously healthy individuals constitute the most common spontaneous inhibitors of any clotting factor. Accurate ests. of the incidence of antifactor VIII inhibitors are not available, since some of these antibodies may not be associated with bleeding, or the condition may be misinterpreted as disseminated intravascular coagulation, especially when it is associated with known underlying malignancy. About 50% of anti-factor VIII antibodies developing in the nonhemophilic population occur in otherwise healthy individuals over the age of 50 yr. Other conditions associated with the development of these inhibitors, in decreasing frequency, include autoimmune diseases, peripartum period, lymphoproliferative disorders, solid tumors and reaction to certain medications [1]. Patients with antibodies against factor VIII usually present with spontaneous bleedings involving soft tissues, retropharyngeal or retroperitoneal spaces, intracerebral or other types of serious hemorrhagic episodes. The most common laboratory abnormality is prolongation of PTT and decreased to absent factor VIII activity. Among the most commonly used products to manage patients with bleeding episodes and autoantibodies against factor VIII are high-dose human factor VIII, and inhibitor by-passing agents. Decreasing the inhibitor titer may also be achieved via plasma exchange and immuno-suppression. The formation of factor VIII antibodies in patients with solid tumors in terms of its course, response to treatment, and prognosis has not been addressed. We describe in this article the occurrence and the course of anti-factor VIII antibodies in 5 patients with solid malignancies.

AB We report a transient type I factor VIII inhibitor that arose in a 30-yr-old hemophilia patient just after staphylococcal septicemia. This situation usually occurs early in the course of substitution therapy with factor VIII concentrate in hemophilia patients. Although disseminated intravascular coagulation and acute respiratory distress syndrome developed after septic shock, the patient recovered following i.v. administration of antibiotics (meropenem and gentamycin), an antithrombin preparation, high-dose methylprednisolone, and recombinant factor VIII concentrate

(rFVIII). During this therapy, however, activated partial thromboplastin time gradually lengthened. On the seventh day of hospitalization, intracranial hemorrhage occurred with right hemiplegia, even though the substitution therapy had continued at the same dosage (30 U/kg per day) of rFVIII. At that point, 4 Bethesda units of the type I inhibitor against factor VIII were detected in the plasma. Increased amts. (46 U/kg per day) of rFVIII and prednisolone were administered, and hypothermic therapy was initiated. Following these treatments, the patient's general condition gradually improved, and within 25 days the inhibitor titer dropped to undetectable levels and did not recur during treatment. These clin. findings suggest that the staphylococcal septic shock may have acted as a trigger in the development of transient factor VIII inhibitor in this patient.

                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the heavy chain variable region of the human monoclonal antibody (NAb), BO2C11. BO2C11 is a human MAb which recognises conformational epitope within the carboxy-terminal of the factor VIII light chain. BO2C11 recognises both the wild type and Arg2150His factor VIII light chains. The MAb produced by the cell line of the invention, KRIXI, specifically recognises the wild type factor VIII light chain.

KRIXI can be used to inhibit the binding of factor VIII to von Willebrand factor in a dose dependant manner. The new cell line KRIXI, is deposited with the Belgian Coordinated Collections of Micro-organisms, under accession number LMBP 5089CB. KRIXI, or fragments of it, optionally with a thrombolytic agent, are useful for the treatment and/or prevention of hemostasis, coagulation arterial thrombosis, and attenuation of coagulation such as intravascular coagulation, arterial thrombosis, arterial restenois; venous thrombosis or arteriosclerosis, and attenuation of coagulation in a mammal. An effective and safe antithrombotic therapy is provided which reduces the risk of bleeding in mammals, more particularly in humans
                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                GKGLEWVGSFDPESGESIYAREFQGSVTWTADTSTDIAYMELSSLRSDDTAVYYCAVPDP 120

                                                                                                                                                                                                                                                            The present invention relates to a pharmaceutical composition for the prevention and/or treatment of systemic inflammancory response syndrome (SIRS), sepsis, septic shock, thrombus formation in the microvasculature and disseminated intravascular coagulation in mammals, comprising as an active ingredient a partial inhibitor of factor VIII, in admaxture with a carrier. Such inhibitors may include the antibodies BO2C11 and KRIXI. The present sequence is the heavy chain variable region of BO2C11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, nootropic, immunosuppressant, cytostatic, gene therapy, cancer, peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's, Parkinson's disease; humrington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic, chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as alzheiner's, Parkinson's disease, Huntington's disease, amyotrophic lateral scherosis, and Shy-Drager Syndrome. Other uses include the cutivities such as: Immune system suppression, activin/inhibin activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GKGLEWVGSFDPESGESIYAREFQGSVTMTADTSTDIAYMELSSLRSDDTAVYYCAVPDP 120

AAX90020 to AAX90029 encode monoclonal antibodies which react with human connective tissue growth factor (CTGP). AAX24369 to AAX24378 represent these monoclonal antibodies. The antibodies are useful in the diagnosis, prevention and treatment of cell proliferation disorders in which CTGP is implicated, including fibrosis of lung, kidney, liver and other tissues; liver cirrhosis; nephritis; skin ulcers and keloid; rheumatoid arthritis; rheumatic vascular inflammation; hepatitis; and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                           61 GKGLEWYGSFDPESGESIYAREFQGSVTMTADISTDIAYMELSSLRSDDTAVYYCA---V 117

                                                                                                                        AAX90020 to AAX90029 encode monoclonal antibodies which react with human connective tissue growth factor (CTGF). AAX24369 to AAX24378 represent these monoclonal antibodies. The antibodies are useful in the diagnosis, prevention and treatment of cell proliferation disorders in which CTGF is implicated, including fibrosis of lung, kidney, liver and other tissues; liver cirrhosis; nephritis; skin ulcers and keloid; rheumatoid arthritis; rheumatic vascular inflammation; hepatitis; and cancer.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with noctropic. Immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system, and as peripheral nervous system, as a peripheral nervous system, as a soleropathise and carral nervous system diseases, amyorrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GKGLEWVGSFDPESGESIYAREFQGSVTWTADTSTDIAYMELSSLRSDDTAVYYCAVP-- 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, antirheumatic, antiarthritic, antidiabetic, antipsoriatic, antiallergic, antiulcer, neuroprotective, antithyroid, vasotropic; immunosuppressive, dermatological, antihinflammatory, hepatotropic, activation inducible lymphocyte immunomodulatory molecule, Albin, monoclonal antibody, allergy, rheumatoid arthritis; diabetes mellitus; multiple sclerosis, autoimmune thyroiditis; posriasis; hepatitis; allergic contact-type dermatitis; chronic inflammatory dermatosis; systemic lupus erythematosus; autoimmune disorder; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                             The invention relates to a novel human antibody (I), preferably a human monoclonal antibody which binds to an activation inducible lymphocyte immunomodulatory molecule (AILIM). (I) is useful for modulating signal transduction into a cell mediated by AILIM, for modulating proliferation of AILIM-expressing cells, for modulating production of a cytokine from AILIM-expressing cells, for inducing antibody-dependent cytokine from AILIM-expressing cells, and for inducing antibody-dependent cytocoxicity against AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells. (I) is useful for treating, preventing or prophylaxis of delayed type allergy. (I) is useful for treating and control diseases associated with AILIM-mediated costimulatory transduction, and for inhibiting the onset and/or advancement of the diseases. (I) is useful for suppression, prevention and/or treatment of chemated arthritis, multiple sclerosis, autoimmune thyroiditis, allergic contact-type dermatitis, chronic inflammatory dermatosis, systemic lupus erythematosus, insulin-dependent diabetes mellitus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      anti-CD40 monoclonal antibody; CD40; cytostatic; virucide; antibacterial; immunostimulant; anti-HIV; hyperproliferative; cancer; viral; bacterial infection; immunodeficiency; neutropenia; HIV; gene therapy; human; variable region heavy chain; 21.2-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GKGLEWVGSFDPESGESIYAREFQGSVTMTADTSTDIAYMELSSLRSDDTAVYYCAVP-- 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      psoriasis, autoimmune or allergic disorders, inflammation, graft versus host reaction, graft versus host disease, immune rejection, disorders host reaction, graft versus host disease, immune rejection, disorders caused by abnormal intestinal immunery, specifically inflammatory intestinal disorders such as ulcerative colitis, pneumonia, hepatitis, nephritis, vasculitis, and pancreatitis. (I) induces no serious immunersjection due to antigenicity to human, i.e., human anti-mouse antigenicity (HAMA) in a host. AAU74296-AAU74201 represent anti-human AILIM monoclonal antibody amino acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MDWTWRILFLVAAATGTHAQVQLVQSGAEVKKPGASVKVSCKVSGYTLTELPVHWVGQAP

The invention relates to a novel chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40. The anti-CD40 antibody of the invention demonstrates cytostatic, virucide, antibacerial, immunostimulant and anti-HIV activities and may be useful for treating a hyperproliferative disorder combined immunodeficiency conditions including neutropenia or HIV infection. The anti-CD40 antibodies may also be useful for detecting CD40 in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD40 antibody variable region heavy chain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40, useful for enhancing an immune response in a human, or treating cancer, HIV, neutropenia or viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 GKGLEWYGSFDPESGESIYAREFQGSVTWTADTSTDIAYMELSSLRSDDTAVYYCAVPDP 120

The present sequence is the human immunoglobulin superfamily protein IGFAM-14. Its gene was isolated from a cDNA library of gallbladder tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for disponents (such as inflammation, AIDS, allergies, anneamia, arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's dispase, diabetes mellitus, emphysema, fraves' disease, hepatitis, complications of cancer, haemodialalysis and ulcerative colitis), complications of cancer, haemodialalysis and extracorporeal circulation, trauma and haematopoletic cancer (such as leukaemia) and infections caused by bacteria, viruses, fungi or parasites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GKGLEWVGSFDPESGESIYAREFQGSVTMTADTSTDIAYMELSSLRSDDTAVYYCA---- 116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunoglobulin superfamily proteins, the agonist and antagonist of the protein is useful for preventing and treating disorders associated with altered levels of the protein such as cancer, immune system disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antigen binding fragment 4B5; monoclonal antibody; cancer; neoplasm; diagnosis; therapy; melanoma; neuroblastoma; glioma; sarcoma; lung carcinoma; metastasis; anti-idiotype antibody; GD2 antigen; human.

                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the coding and protein sequences for a number of human immune system associated proteins (HISAPs). These can be used in the diagnosis and treatment of various autoimmune disorders, infections and cell proliferation diseases. The diseases include AIDs, adult respiratory distress syndrome, anaemia, asthma, atherosclerosis, crohn's disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, osteoarthritis, theumatoid arthritis, scleroderma, systemic lupus erythematosus, arteriosclerosis, cirrhosis and cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This polypeptide comprises the heavy chain variable region of the recombinant human monoclonal antibody (MAD) 4B5. 4B5 recognises carboniant human monoclonal antibody (MAD) 4B5. 4B5 recognises carboniant bulbodies specific for GD2 antigen antibodies specific for GD2 antigen antibodies specific for GD2 antigen antibodies peocific for GD2 antigen and or metastatic melanoma, breast adenocarcinoma, number of adenocarcinoma, small cell lump carcinoma, onch adenocarcinoma and denocarcinoma. The invention encompasses 4B5 derivatives with immunologic specificity for antibodies specific for GD2. These contropies specific for antibodies specific for GD2. These contropies panding fragments, comprise regions of the 4B5 cD8 or antibods by capture and isolated heavy and light chains (see also VDJ junction and regions spanning the 4B5 cD8. Other derivatives include fragments (see AAXOSSD1-54) encoding 4B5 antibody V regions are also provided, and therapeutic plasmids and vectors, including vaccinia virus vectors, comprising these contropies. 4B5 has been shown to mimic GD2, and is particularly cuseful in generating a host immune response to cancer. Products of the invention can be used in the detection and treatment of e.g. astrocytoma, collapsedendscolloma, pending adenocarcinoma, medullobascma, primitive neural collapse can collapse coll lung adenocarcinoma, medullobascma, primitive neural adenocarcinoma, epithelial adenocarcinoma, elements such a denocarcinoma, benecation and adenocarcinoma, collapse collapse collapse cancinoma, pending denocarcinoma, pending promocarcinoma, pending promocarcinoma, collapse

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a fusion protein comprising of TNF alpha fused to the C-terminus of the heavy chain of the human monoclonal antibody 425 (hmAb425). The hmAb425 has specificity for the human EGF receptor. The invention claims for a new pMCLDHAP tricistronic vector (AAV18036) for the expression of an antibody-cyckine fusion protein, hmAb422-TNF alpha. The TNF alpha sequence can be substituted by the IL-2 sequence. The vector alps contains a strong promoter/enhancer unit, a selection marker gene and at least two policyirus derived internal ribosomal entry site (IRES) sequences. The vector can be expressed in ammanian host cells for the production of heteromeric fusion proteins. This expression system is claimed to produce the heteromeric proteins in high yields

Protein sequences (AAR66295-51) are novel human immunoglobulin heavy chain sequences encoded by novel isolated genes. The genes (AAQ78339-7902) were isolated and cloned from a series of cosmid constructs: V202; V103; V21; Y6; V24; 3-31; M84; M18 and M31; by PCR amplification using primers AAQ78917-38. The genes are subdivided into 5 families of Vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with TaqI restriction enzyme. The fragments were iligation products were in vitro packed and infected into E.coli 490A. The fragments were hon subcloned by colony Mybridisation. The Vigaments encoding them are useful in producing human immemmalian hosts. (Updated on 25-MAR-2003 to correct PN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating glomerulonephritis with antibody against complement C5 component - to inhibit complement induced cell lysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |:||||:| | || || || GGLEWMGEILFGSGSTEYAQKFQGRVTWTADTSTSTAYMELSSLRSEDTAVYYCARYFF 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A humanised CDR-grafted and framework sequence-altered Fd, 5G1.1 VH + HGHRL (ARA77610), includes CDRs derived from mouse anti-C5 monoclonal antibody 5G1.1. It can be co-expressed with a humanised light chain (AAR77612) in human 293 EBNA cells using encoding DNAs subcloned into vector APEX-3P (AAT08476). Such humanised recombinant antibodies retain the ability of MAD 5G1.1 to block human complement C5s generation and thus to reduce glomerular inflammation and kidney dysfunction associated with glomerulonephritis. (Updated on 25-MAR-2003 to correct PI field.)

The invention discloses a recombinant antibody comprising a constant region of monoclonal antibody (Mab) 57 linked to a non-Mab 57 variable region. Rabies is an acute, neurological disease caused by infection of the central nervous system with the rabies virus, a member of the Lyssavirus genus of the family Rhabdoviridae. Also disclosed are methods for producing an isolate recombinant antibody by culturing a host cell, containing a recombinant entibody by culturing a host cell, molecule encoding the antibody. And isolating the nucleic acid molecule encoding the antibody varies of a pathogon by expressed and treating an individual exposed to a pathogon by antibodies are useful for preventing (vaccine) and treating an individual exposed to a pathogon, e.g. rabies infection. They are also useful for the qualitative determination of the rabies virus. The sequences presented are the antibody protein fragments, the nucleic acids encoding them or the PCR primers used to construct the recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant antibody comprising a constant region of Mab 57 linked to a non-Mab 57 variable region, useful for treating an individual exposed to a pathogen, e.g. rabies infection.
                                                                                                                               Human; antibody; constant region; monoclonal antibody 57; Mab 57; variable region; Rabies; neurological disease; infection; central nervous system: rabies virus; Lyssavirus; Rhabdoviridae; pathogen; vaccine; virucide; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  67.5%; Score 532; DB 6; Length 476; 67.5%; Pred.
